These codes are used to identify the line number of the text in the document. The codes are assigned to each line of text in the document, starting from line 00 (blank) and ending at line 99 (line 99).

7. China shall:

1. The first step in the process of identifying a problem is to recognize that a problem exists. This is often done by comparing current performance to a desired state or goal.

2. Once a problem is identified, the next step is to define the problem more precisely. This involves identifying the causes of the problem and the scope of the problem.

3. The third step is to generate potential solutions to the problem. This is often done by brainstorming or using a structured problem-solving process.

4. The fourth step is to evaluate the potential solutions and select the best one. This is often done by comparing the solutions to the problem and the organization's resources.

5. The fifth step is to implement the selected solution. This involves putting the solution into action and monitoring its progress.

6. The sixth step is to evaluate the results of the solution. This involves comparing the current performance to the desired state and identifying any remaining problems.

7. The seventh step is to take corrective action if necessary. This involves identifying the causes of any remaining problems and implementing a new solution.

8. The eighth step is to review the process and make improvements. This involves identifying any weaknesses in the process and implementing changes to improve it.

9. The ninth step is to communicate the results of the process. This involves sharing the results with the relevant stakeholders and providing feedback.

10. The tenth step is to document the process. This involves creating a record of the process and the results, which can be used for future reference.

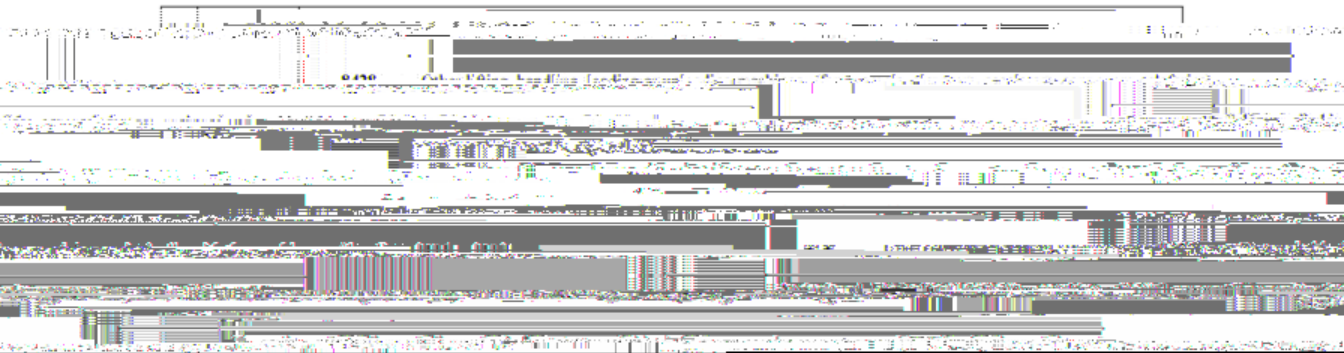

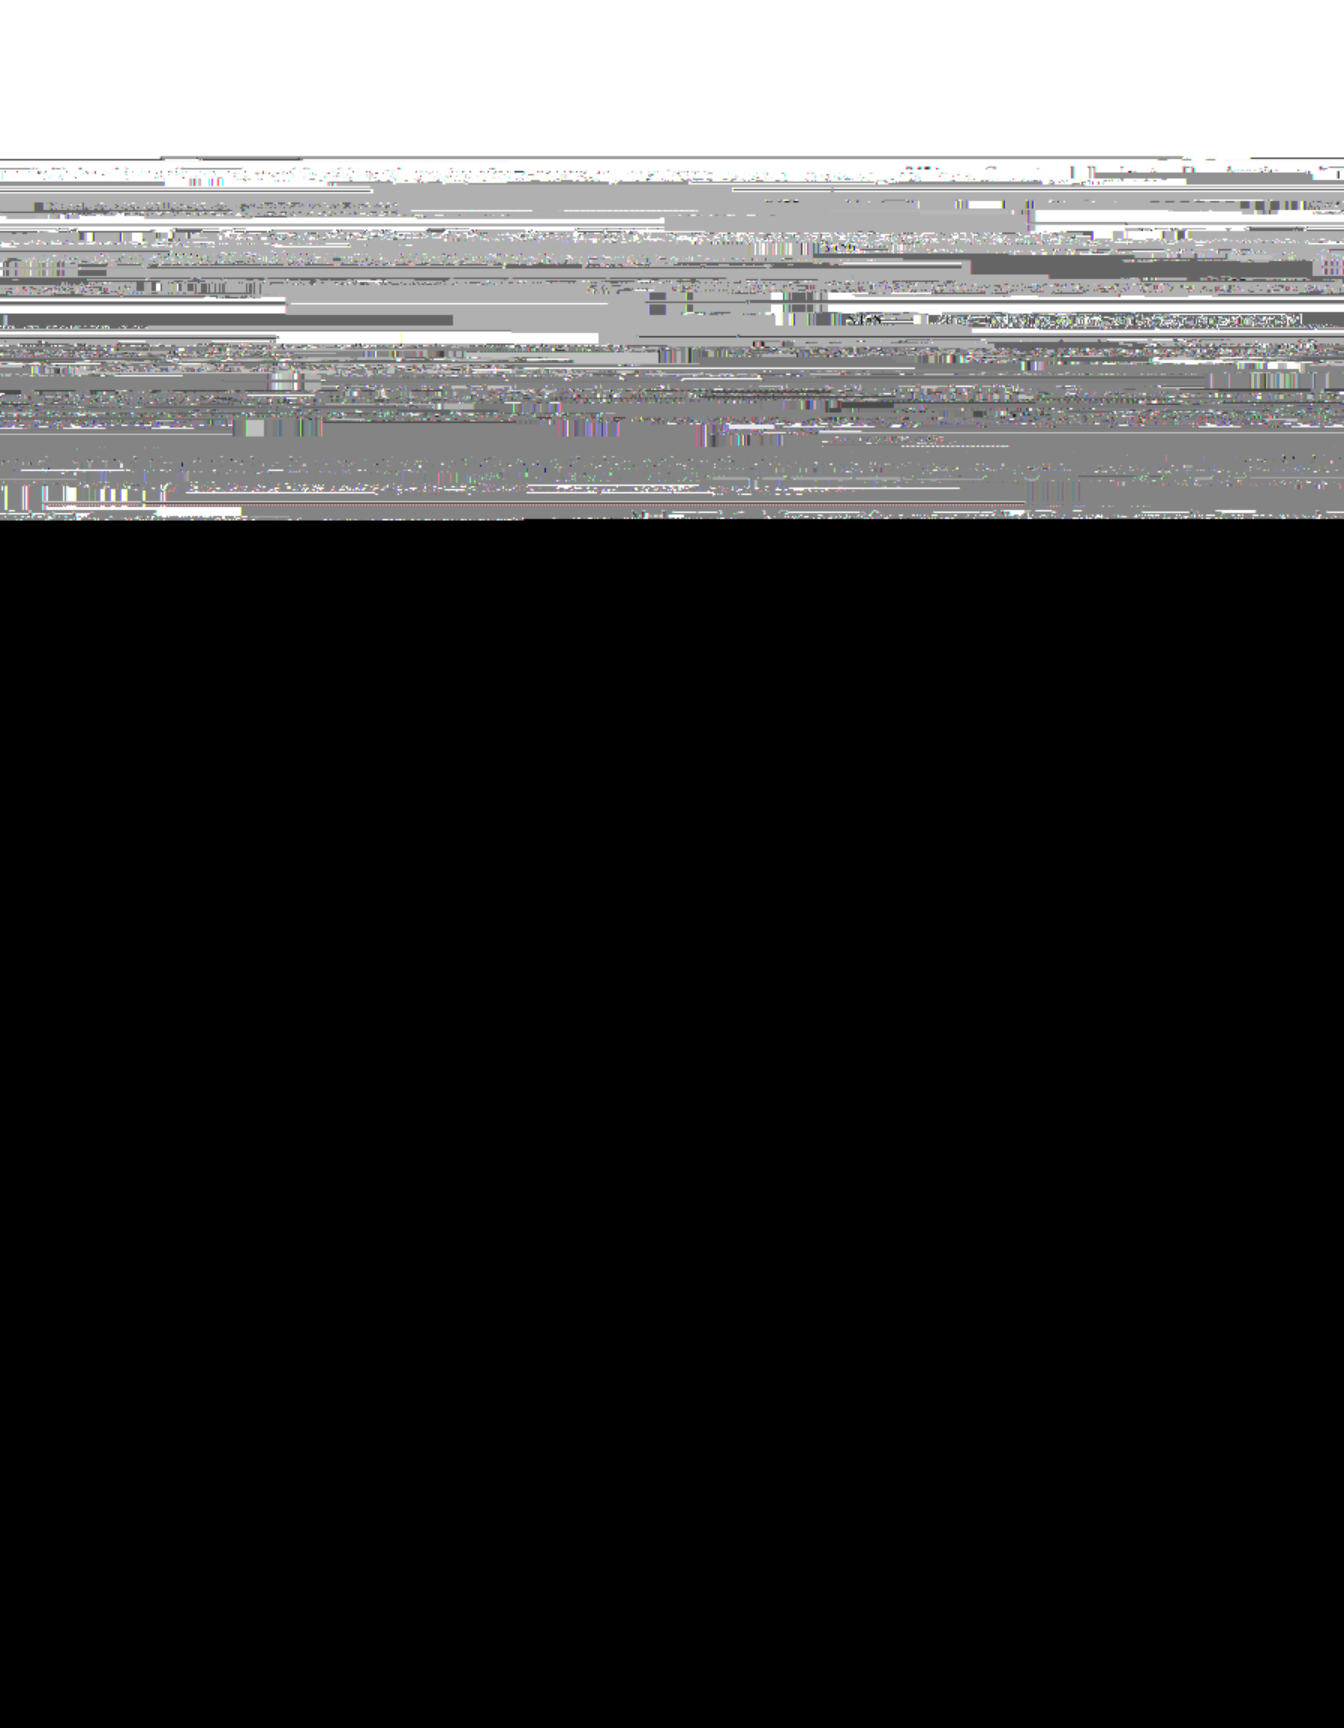

CHAPTER 6

Article 6.2: Trade Opportunities

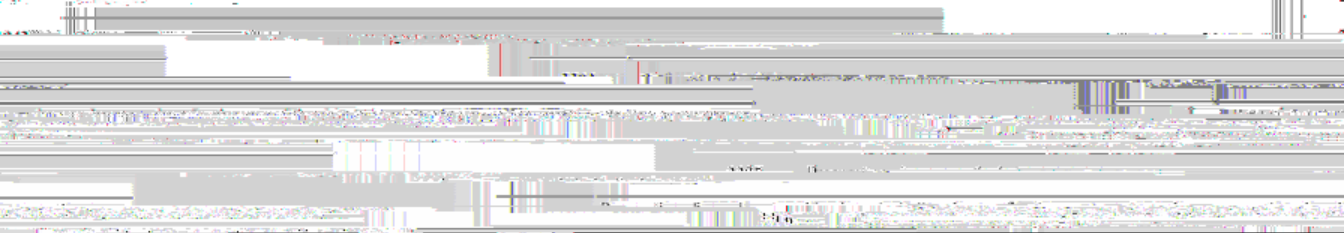

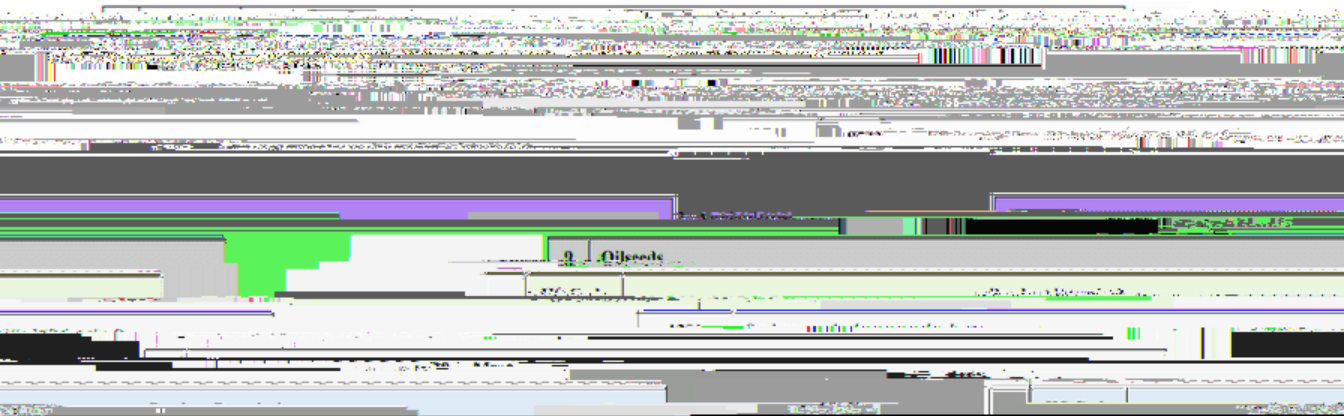

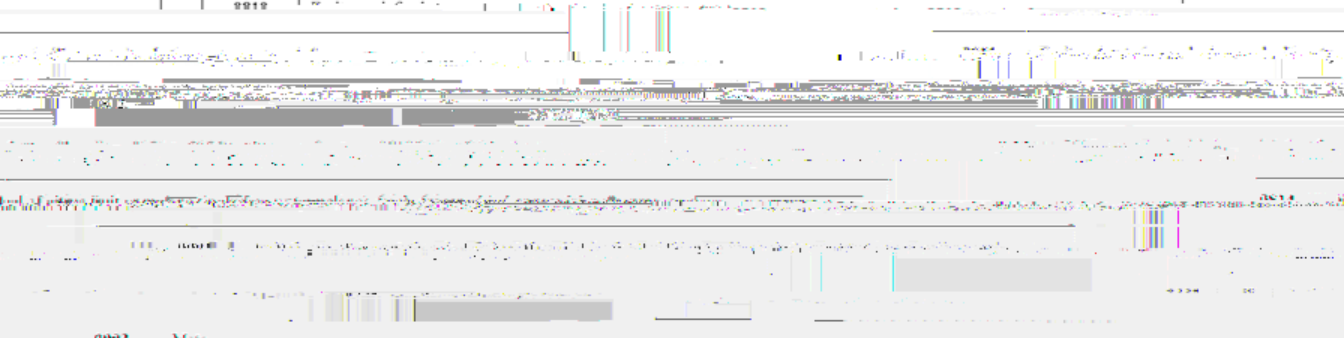

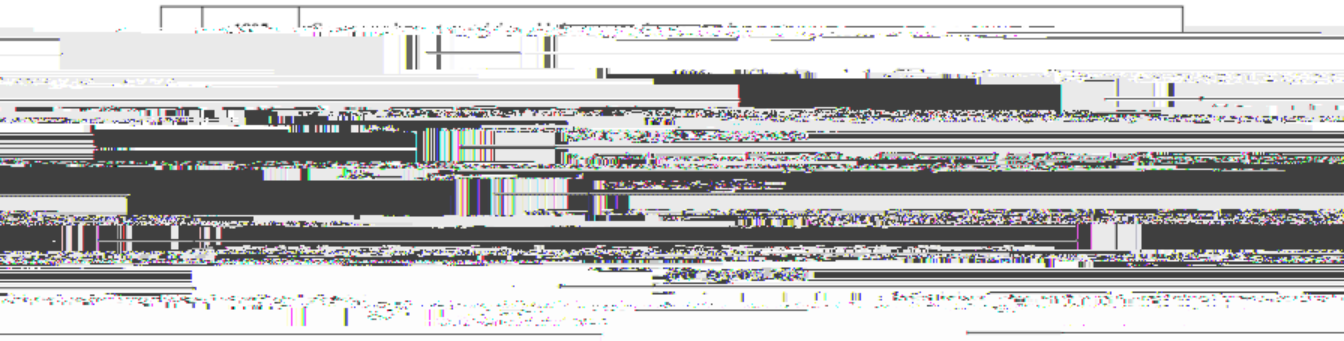

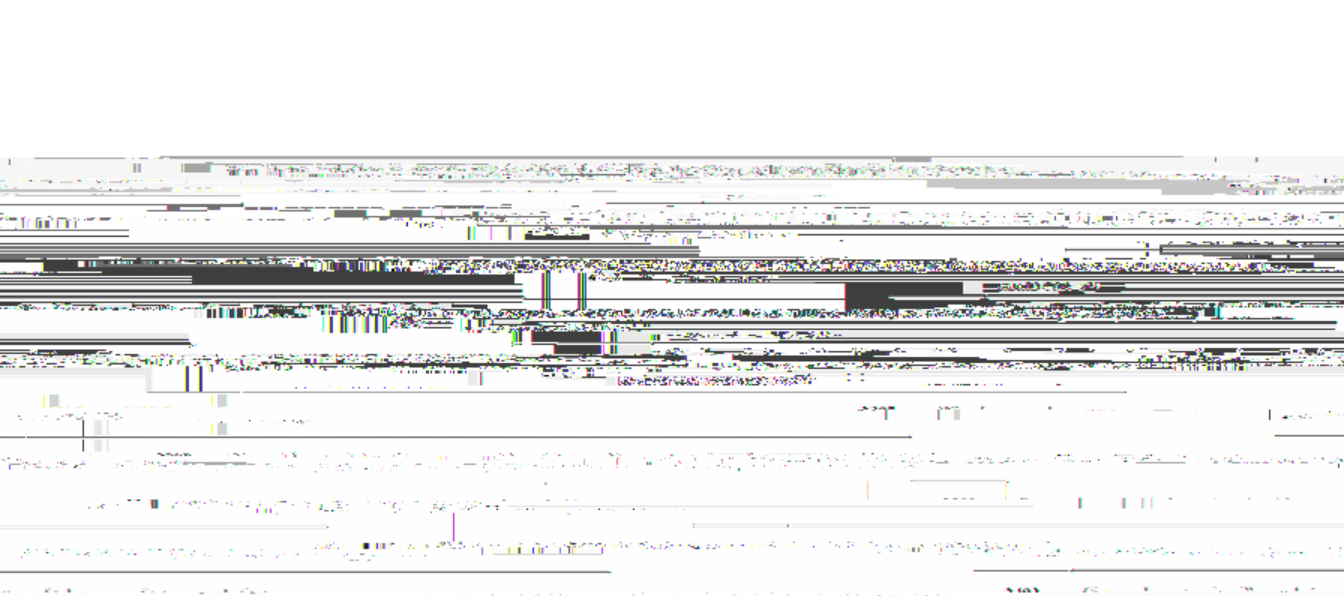

Figure 1. Schematic of the experimental design. The stimulus (red dot) is presented for 100 ms, followed by a fixation period (red dot) for 100 ms. The subject then performs the task (red dot) for 100 ms and receives feedback (red dot) for 100 ms. The task is repeated for multiple trials.
